

## Commands for navigating the internet with Jaws

The following list of commands, both Jaws and browser specific, are a prerequisite for navigating the internet efficiently. The most common commands have been included.

### Google Chrome Basics

- Control + I – move to the address bar
- Control + Tab – switch between browser tabs
- Control + N – create new tab
- Control + D – create new bookmark
- Control + Shift + O – bookmarks list

### Jaws Navigation on the internet

The following quick keys will move you around a webpage by a specific element e.g. button, table or check box.

Shift with any of the below letters will move back by one element.

- A – radio button
- B – button
- C – combo box
- E – edit box
- F – form field
- G – graphic
- H - heading
- I - list
- N – non-linked text
- T – table
- X – check box

### General commands

- Insert + T – read title of current window
- Insert + F7 – Jaws links list
- Control + F – find command
